## 2.3 Contingent strategies for Livestock, Poultry & Fisheries

### 2.3.1 Livestock

|                               | Suggested contingency measures   |   |   |
|-------------------------------|--|---|---|
|                               | Before the event <sup>s</sup>  | During the event  | After the event   |
| <b>Drought</b>                |  |   |   |
| Feed and fodder availability  | <ol style="list-style-type: none"> <li>Awareness of farmer to stock feed and fodder</li> <li>Encourage perennial fodder production</li> <li>Village gaucher lands should be developed</li> <li>On boundaries of agricultural field trees or shrubs like Sesbania, Subabul planted</li> <li>It is essential to establish fodder bank near forest areas.</li> <li>Excess fodder in flush season can be preserved as hay/silage.</li> <li>Explore the possibilities of alternative feed</li> <li>Organizing training Programme of persons connected with Animal Husbandry</li> <li>Livestock insurance</li> </ol> | <ol style="list-style-type: none"> <li>Dry stray and feed to be given</li> <li>Utilizing fodder from perennial trees</li> <li>Transporting excess fodder from adjoining districts.</li> <li>Utilizing the existing crops which fail to grow adequately due to failure of monsoon for feeding of animals.</li> <li>Use of unconventional livestock feed such as sugarcane top, bagasse &amp; banana plant</li> <li>Improving poor quality roughages by ammonia treatment, urea treatment &amp; feeding them.</li> <li>Supplementation of mineral mixtures and vitamin</li> </ol> | <ol style="list-style-type: none"> <li>Hay and silage to be given</li> <li>Supplementary feeding of remaining livestock and the replacement stock.</li> </ol> |
| Drinking water                | <ol style="list-style-type: none"> <li>Stocking of water in vat</li> <li>Preserving water in community tanks</li> </ol>  | Supply of clean drinking water  | Supply of clean drinking water  |
| Health and disease management | Stocking of DNS, salt and molasses   | <ol style="list-style-type: none"> <li>Supply of RN-tose, DNS, Vit-B</li> <li>Conducting animal health camps</li> </ol>   | <ol style="list-style-type: none"> <li>Rehydrate animals, common salt and molasses may be given</li> </ol>  |

|   |   |   |  |
|---|---|---|--|
|   |   | and treating the affected animals.  | 2. Proper disposal of dead animals   |
| <b>Floods</b>                             |   |   |  |
| Feed and fodder availability              | <ol style="list-style-type: none"> <li>1. Sensitization of farmer to stock and protect feed and fodder</li> <li>2. Training to the farmers about care of their animals preparation and distribution of leaflets on livestock disaster.</li> </ol>   | <ol style="list-style-type: none"> <li>1. Supply of crushed maize, rice bran, wheat bran etc.</li> <li>2. Procured feeds and fodder should be fed to all animals</li> <li>3. Straws and stoves that got soaked during floods can be fed to animals as long as rotting or fungal growth has not set.</li> </ol>  | <ol style="list-style-type: none"> <li>1. Supply of crushed maize, rice bran, wheat bran etc.</li> <li>2. Provision of supplementary feeding with vitamin and minerals</li> </ol>  |
| Drinking water                            | Stocking of clean drinking water  | <ol style="list-style-type: none"> <li>1. Arrangement for clean drinking water</li> <li>2. Drinking water be made available to the animals in clean container</li> </ol>  | Chlorination of water and treatment with halogen tablets   |
| Health and disease and shelter management | <ol style="list-style-type: none"> <li>1. Vaccination</li> <li>2. Prior construction of animal shelters in disaster prone areas.</li> <li>3. Temporary relief camps can be set up to provide shelter</li> <li>4. Keep the emergency service kit like Cotton wool, Bandages, surgical gauze, Disinfectants like Potassium permanganate, Dettol, Antibiotic</li> <li>5. Temporary camps may be started for 25-50 animals in each group.</li> <li>6. If no trees or sheds are available shelter the animals under a tent / tarpaulins</li> </ol> | <ol style="list-style-type: none"> <li>1. Treatment of sick animal</li> <li>2. There should be one veterinarian with 3 to 4 village to work</li> <li>3. The team should be well equipped with contingent items like bandages</li> <li>4. Keep the animals loose in paddock (sheltered or unsheltered)</li> <li>5. Releasing animals from the unnatural and harmful position or situation stopping bleeding, binding broken limbs</li> </ol> | <ol style="list-style-type: none"> <li>1. De-worming</li> <li>2. Prompt and appropriate attention to injured by providing necessary medicine</li> <li>3. Vaccination campaign against common endemic disease</li> <li>4. Improving shed hygiene especially in the farmers household through cleaning and disinfection</li> </ol> |
| <b>Cyclone</b>                            |   |   |  |
| Feed and fodder availability              |   |   |  |
| Drinking water                            |   |   |  |
| Health and disease management             |   |   |  |
| <b>Heat wave</b>                          |   |   |  |
| Shelter/environment management            | <ol style="list-style-type: none"> <li>1. Awareness creation</li> <li>2. Green cover of trees</li> </ol>  | Shelter animal at cold windy and shady place  | -  |

|                               |   |   |  |
|-------------------------------|---|---|--|
|                               | <ol style="list-style-type: none"> <li>3. Proper sheltering / housing with white painting outside</li> <li>4. Washing / wallowing / sprinkling or showering</li> <li>5. Provision of cool drinking water</li> <li>6. Cooling devices like fan, wet curtains and air cooler</li> </ol> |   |  |
| Health and disease management | Stocking of DNS,salt and molasses   | Care of affected animal and should be over feed | <ol style="list-style-type: none"> <li>1. Rehydrate animals</li> <li>2. Common salt and molasses may be given</li> </ol> |
| Feed management               | <ol style="list-style-type: none"> <li>1. Feeding green fodder / silage/hay</li> <li>2. Provision for night feeding</li> <li>3. Graze early in the morning and late in the afternoon</li> </ol>   |   |  |

<sup>s</sup> based on forewarning wherever available, (Source: CDVO, Boudh)

### 2.3.2 Poultry

|                               | Suggested contingency measures  |   |   | Convergence/linkages with ongoing programs, if any |
|-------------------------------|---|---|---|--|
|                               | Before the event <sup>a</sup>   | During the event  | After the event   |  |
| <b>Drought</b>                |   |   |   |  |
| Shortage of feed ingredients  | Ensure procurement of feed ingredients                                  | Feed supplementation will be made                         | Attempt will be made for available of feed ingredient or compound feed to the farmers | -  |
| Drinking water                | Check water source for ensuring sufficient water                        | Attempt will be made to provided sanitized drinking water | Availability of water will be ensured by digging of bore well                         |  |
| Health and disease management | Procurement of vaccines and medicines and antistress drugs, antibiotics | Continue feeding of antistress drugs                      |   |  |
| <b>Floods</b>                 |   |   |   |  |
| Shortage of feed ingredients  | Awareness of farmers to stock poultry feed                              | Supply of poultry feed                                    | Supply of poultry feed  | Govt.Reliefprogramme                               |
| Drinking water                | Chlorination of water   | Chlorination of water                                     | Chlorination of water   | -  |

| Health and disease management  | Vaccination   | Treatment of sick Bird   | De-worming   | Govt.ReliefProgramme |
|--------------------------------|---|--|--|----------------------|

### 2.3.3 Fisheries/ Aquaculture

|   | Suggested contingency measures  |  |  |
|---|---|--|--|
|   | Before the event <sup>a</sup>   | During the event   | After the event  |
| <b>1)Drought</b>  |   |  |  |
| A.Capture   |   |  |  |
| Marine  | -   | -  | -  |
| Inland  |   |  |  |
| (i)Shallow water depth due to insufficient rains/inflow             | <ol style="list-style-type: none"> <li>Reduction in stocking density,regulation of out flow of water</li> <li>Restricted release of water from reservoir.</li> <li>Supplementary water harvesting structures like ponds and tanks has to be developed.</li> <li>Renovation and maintenance of existing water harvest structures.</li> </ol> | Harvesting table sized fish  | Restocking with yearlings  |
| (ii)Changes in water quality  | <ol style="list-style-type: none"> <li>Stocking of herbivorous fish and steps to minimize pollution</li> <li>Prepare to release water into the habitat.</li> </ol>  | <ol style="list-style-type: none"> <li>Harvesting table sized fish</li> <li>Mixing of water from the water harvest structure like ponds and tanks into the fish habitat.</li> </ol>      | <ol style="list-style-type: none"> <li>Restocking with yearlings</li> <li>Monitoring the water quality and health of aquatic organisms.</li> </ol> |
| (iii)Any other  | -   | -  | -  |
| <b>B.Aquaculture</b>  |   |  |  |
| (i)Shallow water in ponds due to insufficient rains/inflow          | <ol style="list-style-type: none"> <li>Advised for production of yearling</li> <li>Building deep ditches in culture ponds for shelter of the fish to overcome high temperature</li> </ol>   | <ol style="list-style-type: none"> <li>Yearlings can be transferred to culture tank</li> <li>Recharge the ponds with bore well water</li> <li>Partial harvesting of the stock</li> </ol> | Pond preparation for yearling culture in next year   |
| (ii)Impact of salt load build up in ponds / change in water quality | Application of organic manure in culture system   | <ol style="list-style-type: none"> <li>Provision for aeration and water sanitation</li> <li>Recharge the ponds with bore well water</li> </ol>   | <ol style="list-style-type: none"> <li>Feeding and manuring as usual</li> <li>Application of organic manure</li> </ol>                             |
| (iii)Any other  |   |  |  |
| <b>2) Floods</b>  |   |  |  |
| A.Capture   |   |  |  |

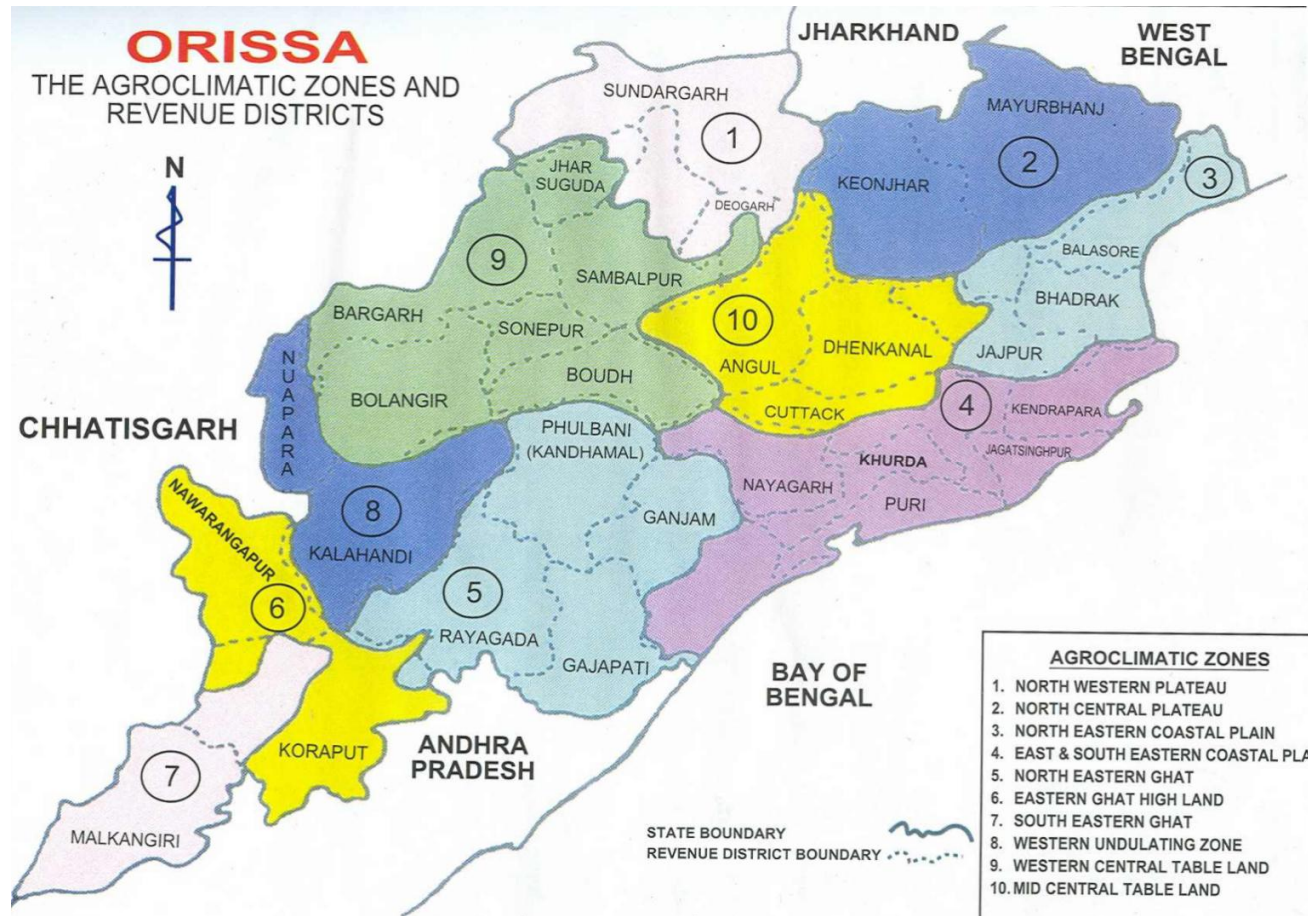

|  |  |   |  |
|--|--|---|--|
| Marine   | -  | -   | -  |
| <b>Inland</b>  |  |   |  |
| (i)No. of boats / nets/damaged                       | 1. Flood warning to fisherman,repairing of dykes<br>2. Non operation of fixed bag nets in streams and rivers.<br>3. Insurance coverage for nets and boats. | 1. Advice the fisher man not to venture for fishing and take care of the implements<br>2. Checking of the safety of the boats / nets<br>3. Number of crew and load should be much below the marked tonnage. | 1. Assessment of the damage and report to higher quarters<br>2. Maintenance of nets  |
| (ii)No.of houses damaged                             | Insurance coverage for houses.   | -   | Settlement of insurance  |
| (iii) Average compensation paid                      | 1. Storage of sand filled bags for emergency use<br>2. Repair and maintenance of bunds<br>3. Preparedness for relief                                       | 1. Timely broadcast and telecast of danger level with respect to water level<br>2. Relief operation   | 1. Relief operation will continue<br>2. Financial support to other people  |
| (iv) Loss of stock                                   |  |   | 1. Assessment of stock and replenishment<br>2. Habitat restoration for the stock remaining   |
| (v)Changes in water quality                          | -  | -   | Application of lime  |
| (vi) Health and diseases                             | Water quality management and prophylactic treatment  | Mass treatment and isolation of diseased fish   | 1. Restocking with yearling<br>2. Observation of the health status of fish and accordingly control measure should be taken.<br>3. Control on transport of brooders and seeds |
| <b>B.Aquaculture</b>                                 |  |   |  |
| (i)Inundation with flood water                       | 1. Strengthening of dykes inlet and outlet system<br>2. Outlet and inlet facility should be their  | Net enclosure should be provided over the dyke to prevent the escape of fish from pond.   | 1. Incase of loss of stock restocking with yearlings or fingerlings<br>2. Repairing and strengthening of dyke  |
| (ii)Water contamination and changes in water quality | Application of lime  | Steps to drain out excess water   | Application of Geolites, lime, Alum, KMnO <sub>4</sub>   |
| (iii) Health and diseases                            | Water quality management and prophylactic treatment  | Mass treatment and isolation of diseased fish   | 1. Application of Geolites, lime, Alum, KMnO <sub>4</sub><br>2. Assessment of the health status of   |

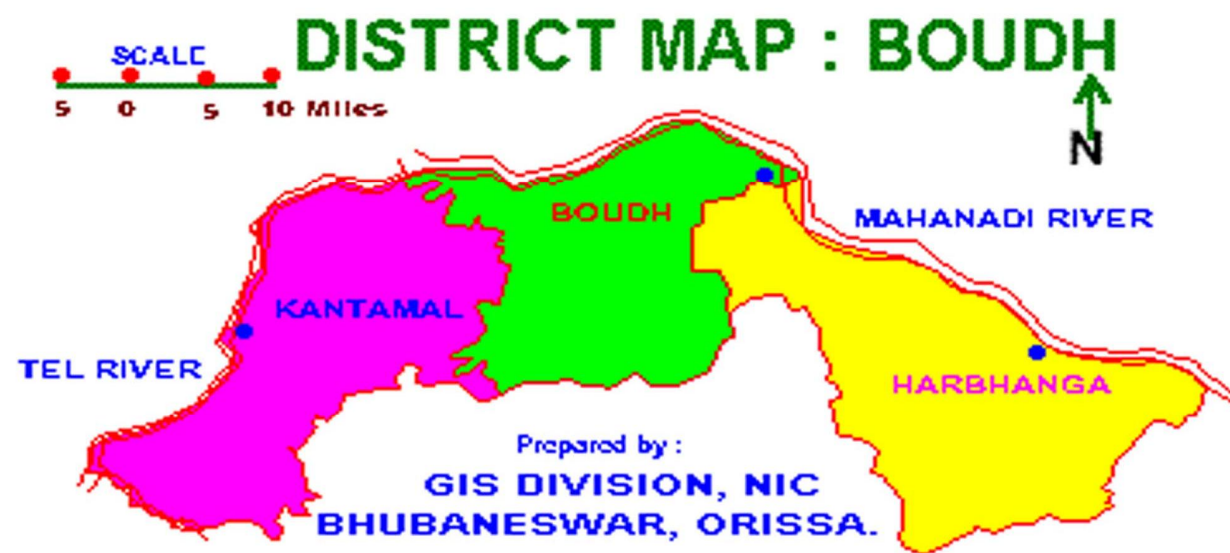

|  |  |   |   |
|--|--|---|---|
|  |  |   | fish<br>3. Control on transport of brooders and seeds   |
| (iv) Loss of stock and inputs (feed, chemicals etc)                | <ol style="list-style-type: none"> <li>1. Strengthening of dykes and keeping the inputs in safe</li> <li>2. Before flood the stock should be harvested</li> <li>3. Construction of flood shelter for pumps, aerators etc.</li> <li>4. Transport of feed and chemicals to safer place.</li> <li>5. Purchase of feeds and chemicals</li> </ol> | <ol style="list-style-type: none"> <li>1. Not to allow any fish to escape out with suitable means.</li> <li>2. Net enclosure should be provided over the dyke to prevent the escape of fish</li> <li>3. Water should be diverted from the main stream.</li> <li>4. Sand bags can be used for protection of dykes.</li> <li>5. Storing of feed and chemicals to safer place</li> </ol> | <ol style="list-style-type: none"> <li>1. Stock assessment and restocking</li> <li>2. Repairing of dykes</li> <li>3. Assessment of quality of feed</li> </ol> |
| (v) Infrastructure damage (pumps, aerators, hut etc)               | Keeping all the implements in safer place  |   | Repairing of pumps, aerators & damaged hut  |
| (vi) Any other   | -  | -   | -   |
| <b>3. Cyclone / Tsunami</b>  | -  | -   | -   |
| A. Capture   | -  | -   | -   |
| Marine   | -  | -   | -   |
| (i) Average compensation paid due to loss of fishermen lives       | -  | -   | -   |
| (ii) Avg. no. of boats / nets/damaged                              | -  | -   | -   |
|  |  |   |   |
| Inland   |  |   |   |
| B. Aquaculture   |  |   |   |
| (i) Overflow / flooding of ponds                                   |  |   |   |
| (ii) Changes in water quality (fresh water / brackish water ratio) |  |   |   |
| (iii) Health and diseases  |  |   |   |
| (iv) Loss of stock and inputs (feed, chemicals etc)                |  |   |   |

|   |   |   |   |
|---|---|---|---|
| (v) Infrastructure damage (pumps, aerators, shelters/hutsetc) |   |   |   |
| (vi) Any other  |   |   |   |
| <b>4. Heat wave and cold wave</b>                             |   |   |   |
| <b>A. Capture</b>   |   |   |   |
| Marine  | -   | -   | -   |
| Inland  | -   | 1. During hot waves night fishing should be done<br>2. Preservation by cold chain should be increased during hot waves.   | -   |
| <b>B. Aquaculture</b>   |   |   |   |
| (i) Changes in pond environment (water quality)               | 1. Maintaining the water level to optimum<br>2. During hot waves adequate water depth should be maintained. | 1. Provision for aeration and water sanitation<br>2. During hot waves mixing of water with fresh water<br>3. The culture system should be provided with aeration<br>4. Partial harvesting can be done | Provision for aeration and water sanitation |
| (ii) Health and Disease management                            | 1. Water quality management and prophylactic treatment<br>2. Application of lime and turmeric               | 1. Mass treatment and isolation of diseased fish<br>2. Feeding should be stopped  | Restocking with yearling                    |
| (iii) Any other   |   |   |   |
